

Customer Interaction Review

synthetic service rehearsal corpus — O1 only, never O2/O3 (PRD §2.3)

The one thing to know

33 / 100 contacts matched at least one avoidable pattern

distinct interactions matching ≥ 1 member pattern (union over hits), interaction-unit only · resolve with `cix query <run_dir> --metric avoidable_contact_rate`

\$4,040–\$12,120 / yr indicative automatable opportunity

indicative and inferred, not operator-confirmed; value is additive across distinct occurrences; remedies shared across plays: SW-STATUS-SELFserve (implementation effort is shared)

What's working

- **Issues resolved on first contact** — 82 (82% of eligible). The healthy counter-pattern — resolved in one interaction, no follow-up needed.

Where the leverage is

#	What's happening	How often	Effort / payoff	Est. value / yr	Monday action
1	Manual after-call admin Agents doing record-keeping by hand after the call that a capture-at-source step removes.	87 occurrence	low / large	\$3,480–\$10,440	Capture at the interaction -> structured extraction SW-ADMIN-CAPTURE
2	Rote requests a person handled Fully deterministic asks (resets, address changes) a self-service path resolves without an agent.	19 occurrence	medium / medium	\$380–\$1,140	Self-service status + automated routing SW-STATUS-SELFserve
3	Avoidable transfers Contacts transferred or	9 occurrence	medium / medium	\$180–\$540	

escalated for want of first-
line capability.

Self-service status +
automated routing

SW-STATUS-
SELF-SERVE

Upstream problems worth fixing

- **Contacts caused by billing errors** — 19 (19% of contacts). Calls driven by a billing, invoice, or charge error the customer should not have had to make.
- **Repeat contacts on unresolved issues** — 8 (8% of contacts). Customers coming back because the first contact did not resolve the problem.

Watch list — real, no off-the-shelf remedy yet

- **Avoidable provider-side failures** — 11 interaction. Contacts that exist because of a provider-side failure that could have been anticipated.
- **Inconsistent answers across contacts** — 6 occurrence. The same question answered differently on different contacts.
- **Status-chase calls** — 6 interaction. Contacts whose sole purpose is to chase the status of something already in progress.

Why you can trust these numbers

100% of 100 eligible interactions read (0 residual). Drops: 9 candidate claims, 0 quote drops, 0 stat drops.

Quote-level evidence pending (next run) — findings currently carry counts only.
